Samzon Pallet-Changer is a stationary machine for exchanging pallets without manual handling of the pallets. The pallet is fed into the machine using a pallet truck or pallet jack. The machine rotates back 115-degrees with the product and the bottom plate is lowered back down to the ground with the existing pallet to be exchanged with the new pallet. The bottom plate then lifts the new pallet back up under the product and the product is lowered back down, standing on top of the new pallet. The pallet turner can be delivered with a variety of extra equipment and surface treatments. Surface treatment is powder coated but can also be delivered in galvanized treatment.
